Profile

I'm a JavaScript and QuickBase developer with a tech and insurance background. I improve operating procedures, increase user productivity, deal accuracy, improved risk management, and provide data insights.

Projects

JavaScript UI tool to define and scope services hosted in Code Pages. Spreadsheet data generates the content and behavior of the front end UI. The front end UI enables users to scope services with ease.

Quickbase Word Document generation tool for legal agreements spanning the globe. Many factors determine which type of document is generated, which sections are used, the verbiage, and the formatting of the document.

Bid generation tool hosted in Code Pages that does a multi stage cost factor analysis to determine the cost of multiple services and combine them into a completed bid.

Quickbase-js; an open source Typescript API client for the Quickbase JSON RESTful API. Support for various authentication types (`user token`, `temporary tokens`, `SSO token`), concurrent `rate limiting` strategies, `auto pagination`, `date` conversion, `429` (rate limit) and `401` (auth) error handling retries. It uses a Proxy to dynamically invoke API methods derived from the Quickbase OpenAPI specification.

Skills

QuickBase, Javascript, TypeScript, React, Vue, NodeJS, Figma, Jira, Agile Development, REST API, Relational Database, Pipelines, Formula Fields, Forms, Reports

Employment

Hitachi Vantara - JavaScript QuickBase Developer
June 2020 - May 2024, Remote

CTC Transportation Insurance - QuickBase JavaScript Developer
